

# HAUNTED HOUSE

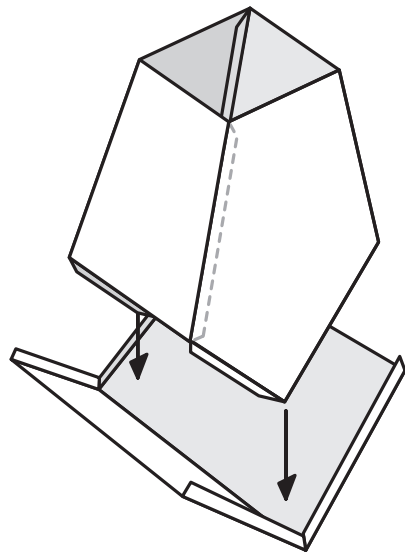

- 1) Cut out along the edges (indicated by the chain saws) of Sides A and B and the Roof.
- 2) Fold and glue tabs on Sides A and B.
- 3) Fold the roof's "facia" tabs and along the ridge.
- 4) Place the roof upside down in one hand and carefully lower the assembled house into the center of the roof with the other hand. Press the roof against the glued tabs of the house (see figure on page two).

A nice effect to the Haunted House is to place it over a small candle, (6cm diameter x 4cm tall, with a short wick) or flash light, turning it into a luminaire. *Keep in mind, having paper around fire warrants safety concerns and supervision.*

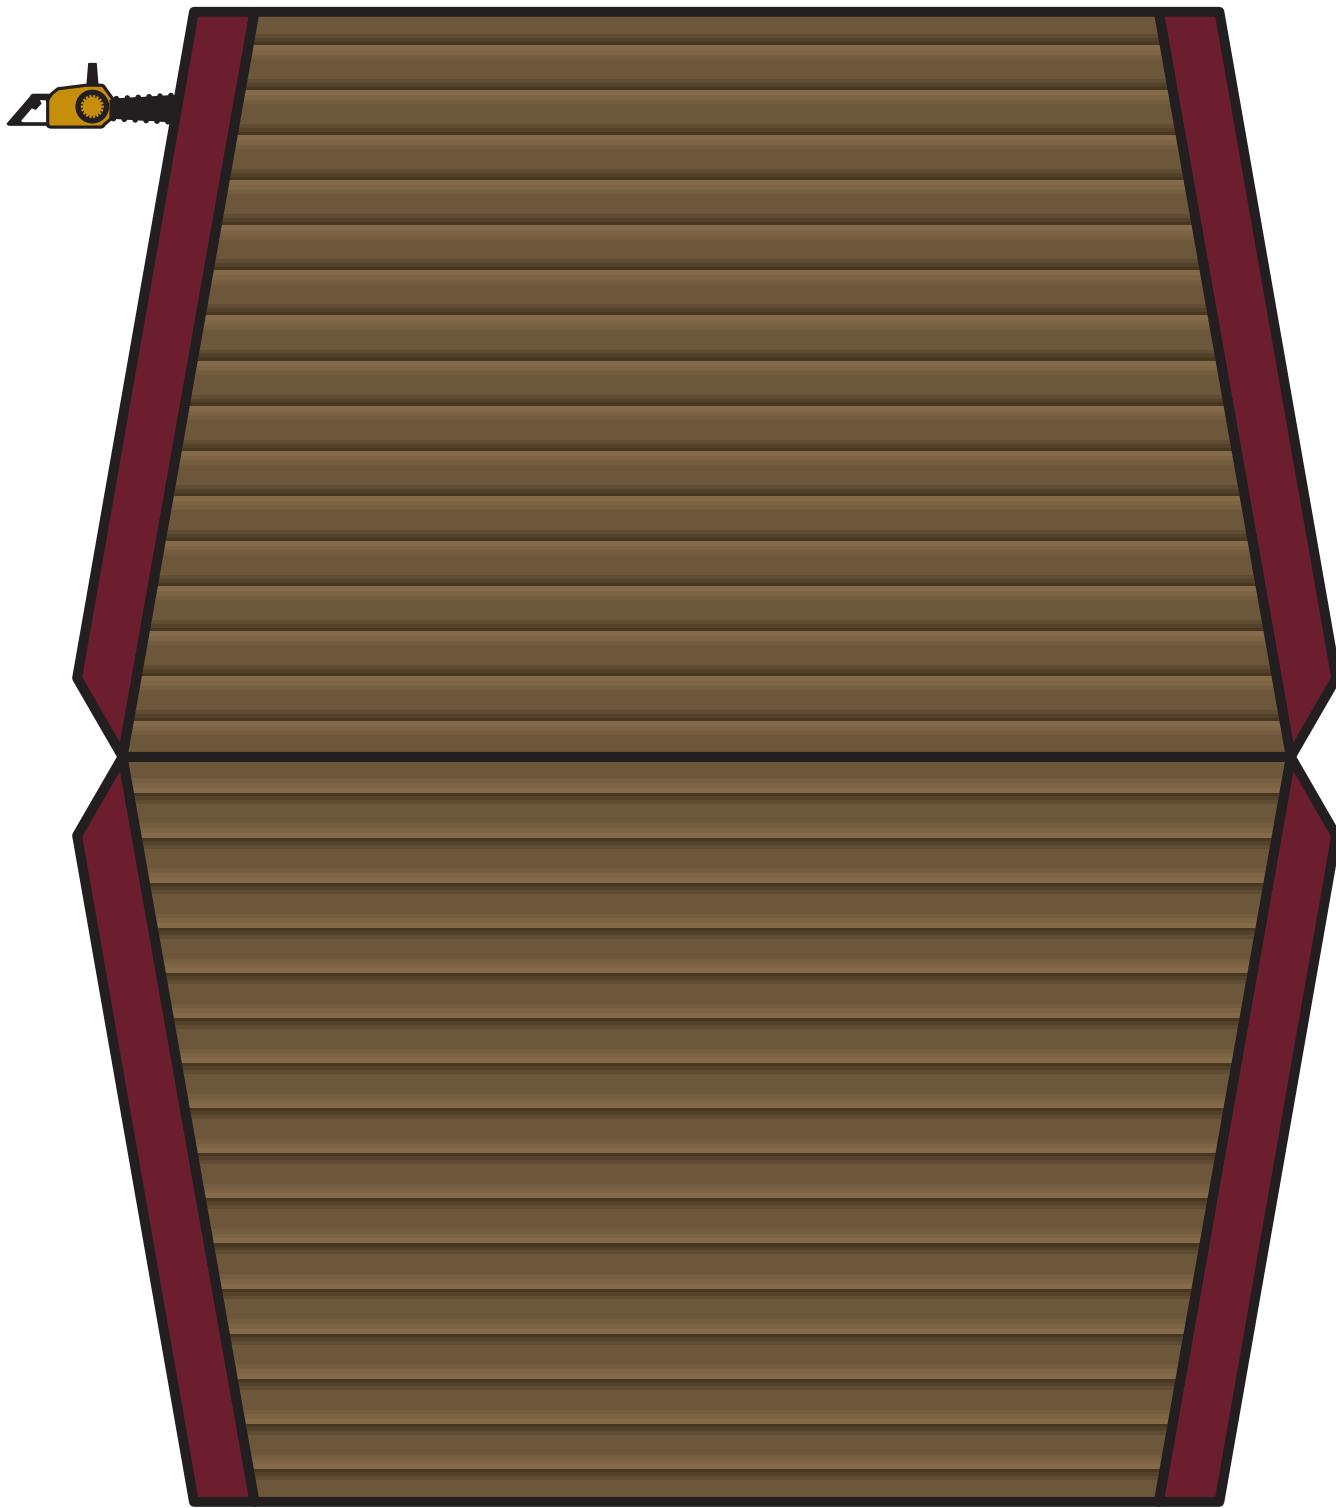

SIDE A

Lower the assembled haunted house onto the roof and press the glued tabs against the roof

**SIDE B**

ROOF
